DIH-SÜD – Digital Innovation Hub Süd

DIH SÜD - Digital Innovation Hub Süd

Was ist der DIH SÜD?

Der **Digital Innovation Hub Süd** ist ein nicht-wirtschaftlich tätiges Kompetenznetzwerk, das als Koordinations- und Anlaufstelle für Selbstständige und Unternehmen zum Thema Digitalisierung im Raum Süd-Österreich dient.

Unser Ziel ist es Digitalisierung in KMU zu ermöglichen, indem wir:

- Bewusstsein für digitale Herausforderungen und Chancen schaffen
- bestehendes Angebot einfach kommunizieren und zugänglich machen
- Anwender und Anbieter zusammenbringen
- spannende Projekte initiieren
- Wissenstransfer zwischen F&E und Wirtschaft fördern.

HAFNIUM - Microsoft Exchange

March 2, 2021

HAFNIUM targeting Exchange Servers with 0-day exploits

Microsoft Threat Intelligence Center (MSTIC)
Microsoft 365 Defender Threat Intelligence Team
Microsoft 365 Security

Who is HAFNIUM?

HAFNIUM primarily targets entities in the United States across a number of industry sectors, including infectious disease researchers, law firms, higher education institutions, defense contractors, policy think tanks, and NGOs.

HAFNIUM has previously compromised victims by exploiting vulnerabilities in internet-facing servers, and has used legitimate open-source frameworks, like [Covenant](#), for command and control. Once they've gained access to a victim network, HAFNIUM typically exfiltrates data to file sharing sites like [MEGA](#).

In campaigns unrelated to these vulnerabilities, Microsoft has observed HAFNIUM interacting with victim Office 365 tenants. While they are often unsuccessful in compromising customer accounts, this reconnaissance activity helps the adversary identify more details about their targets' environments.

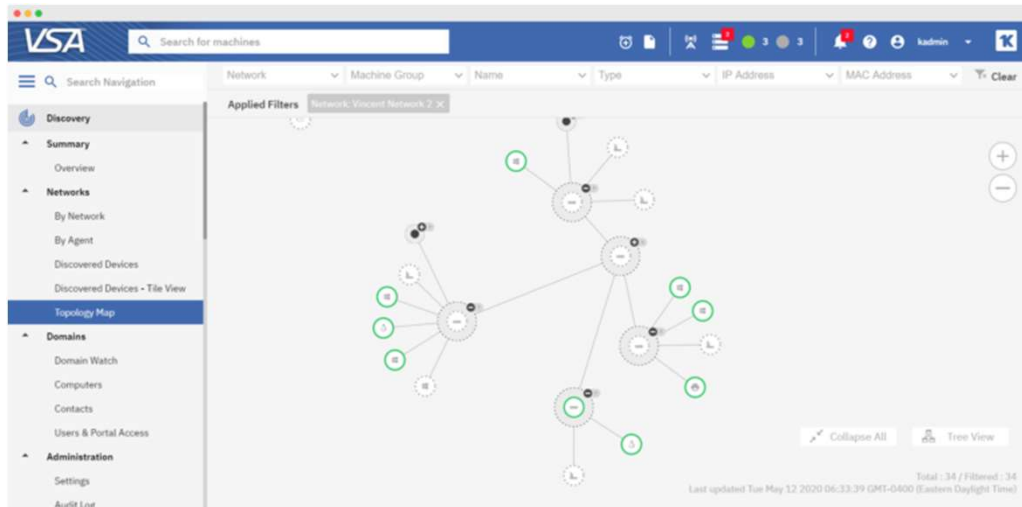

HAFNIUM operates primarily from leased virtual private servers (VPS) in the United States.

HAFNIUM - Microsoft Exchange

- **Jan. 5:** DEVCORE alerts Microsoft of its findings.
- **Jan. 6:** Volexity spots attacks that use unknown vulnerabilities in Exchange.
- **Jan. 8:** DEVCORE reports Microsoft had reproduced the problems and verified their findings.
- **Jan. 25:** DEVCORE snags [proxylogon.com](#), a domain now used to explain its vulnerability discovery process.
- **Jan. 27:** Dubex alerts Microsoft about attacks on a new Exchange flaw.
- **Jan. 29:** Trend Micro publishes [a blog post](#) about “China Chopper” web shells being dropped via Exchange flaws (but attributes cause as Exchange bug Microsoft patched in 2020)
- **Feb. 2:** Volexity warns Microsoft about active attacks on previously unknown Exchange vulnerabilities.
- **Feb. 8:** Microsoft tells Dubex it has “escalated” its report internally.
- **Feb. 18:** Microsoft confirms with DEVCORE a target date of Mar. 9 (tomorrow) for publishing security updates for the Exchange flaws. That is the second Tuesday of the month — a.k.a. “Patch Tuesday,” when Microsoft releases monthly security updates (and yes that means check back here tomorrow for the always riveting [Patch Tuesday roundup](#)).
- **Feb. 26-27:** Targeted exploitation gradually turns into a global mass-scan; attackers start rapidly backdooring vulnerable servers.
- **Mar. 2:** A week earlier than previously planned, Microsoft [releases updates to plug 4 zero-day flaws in Exchange](#).
- **Mar. 3:** Tens of thousands of Exchange servers compromised worldwide, with thousands more servers getting freshly hacked each hour.
- **Mar. 4:** White House National Security Advisor **Jake Sullivan** [tweets](#) about importance of patching Exchange flaws, and how to detect if systems are already compromised.
- **Mar. 5, 1:26 p.m. ET:** In live briefing, White House press secretary **Jen Psaki** [expresses concern](#) over the size of the attack.
- **Mar. 5, 4:07 p.m. ET:** KrebsOnSecurity [breaks the news](#) that at least 30,000 organizations in the U.S. — and hundreds of thousands worldwide — now have backdoors installed.
- **Mar. 5, 6:56 p.m. ET:** Wired.com confirms the reported number of victims.
- **Mar. 5, 8:04 p.m. ET:** Former CISA head **Chris Krebs** [tweets](#) the real victim numbers “dwarf” what’s been reported publicly.
- **Mar. 6:** [CISA says](#) it is aware of “widespread domestic and international exploitation of Microsoft Exchange Server flaws.”
- **Mar. 7:** Security experts [continue effort to notify victims](#), coordinate remediation, and remain vigilant for “Stage 2” of this attack (further exploitation of already-compromised servers).
- **Mar. 9:** Microsoft says 100,000 of 400,000 Exchange servers globally remain unpatched.
- **Mar. 9:** Microsoft “[Patch Tuesday](#),” (the original publish date for the Exchange updates); Redmond patches 82 security holes in Windows and other software, including a zero-day vulnerability in its web browser software.
- **Mar. 10:** Working exploit for Exchange flaw [published on Github](#) and then removed by Microsoft, which owns the platform.
- **Mar. 10:** Security firm ESET [reports](#) at least 10 “advanced persistent threat” (APT) cybercrime and espionage groups have been exploiting the newly-exposed Exchange flaws for their own purposes.

Garmin - Ransomware

Monday, 27 July 2020, 12:30 pm CDT

Garmin issues statement on recent outage

Payed?

Affected systems are being restored and normal operation is expected soon

OLATHE, Kan. –(BUSINESS WIRE)–

Garmin® Ltd. (NASDAQ: GRMN), today announced it was the victim of a cyber attack that encrypted some of our systems on July 23, 2020. As a result, many of our online services were interrupted including website functions, customer support, customer facing applications, and company communications. We immediately began to assess the nature of the attack and started remediation. We have no indication that any customer data, including payment information from Garmin Pay™, was accessed, lost or stolen. Additionally, the functionality of Garmin products was not affected, other than the ability to access online services.

Norsk Hydro ransomware incident losses reach \$40 million after one week

Norsk Hydro: Hydro subject to cyber-attack

Hydro became victim of an extensive cyber-attack in the early hours of Tuesday (CET), impacting operations in several of the company's business areas.

IT-systems in most business areas are impacted and Hydro is switching to manual operations as far as possible. Hydro is working to contain and neutralize the attack, but does not yet know the full extent of the situation.

GandCrab Decryptor

gdcbghvjyqy7jck.onion

- GandCrab -

Welcome!
WE ARE REGRET, BUT ALL YOUR FILES WAS ENCRYPTED!

AS FAR AS WE KNOW:

Country	United States - [redacted]
OS	Windows 7 Professional (x64 bit)
PC User	[redacted]
PC Name	[redacted]
PC Group	WORKGROUP
PC Lang.	en-US
HDD	C
Date of encrypt	[redacted]
Amount of your files	1417
Volume of your files	1030241268

But don't worry, you can return all your files! We can help you!
Below you can choose one of your encrypted file from your PC and decrypt him, it is test decryptor for you.
But we can decrypt only **1 file for free.**

No file selected.

Max. file size: 2 Mb. Allowed files: txt, jpg/jpeg, jpeg, bmp, png, gif.

ATTENTION!
Don't try use third-party decryptor tools!
Because this will destroy your files!

What do your need?
You need **GandCrab Decryptor**.
This software will decrypt all your encrypted files and will delete **GandCrab** from your PC.
For purchase you need crypto-currency **DASH** (1 DASH = 775.638 \$).
How to buy this currency you can [read it here](#).

How much money your need to pay? Below we are specified amount and our wallet for payment

-Price-

1.5 DASH (1200 USD)

-DASH address for payment-

Generating an address.
Please check page later.

-To make a payment, you have this time-

04	02	33	42
DAYS	HOURS	MINUTES	SECONDS

-After this time the amount will double and will be-

3 DASH (2400 USD)

This process is fully automated, all payments is instant.
After your payment, please refresh this page and you can download here **GandCrab Decryptor!**
If you have any questions, please, don't hesitate, and write in our [Support service 24/7](#).

All the good things come to an end.

For the year of working with us, people have earned more than \$ 2 billion, we have become a nominal name in the field of the underground in the direction of crypto-fiber.

Earnings with us per week averaged \$ 2,500,000 .

We personally earned more than 150 million dollars per year. We successfully cashed this money and legalized it in various spheres of white business both in real life and on the Internet.

We were glad to work with you. But, as it is written above, all good things come to an end.

We are leaving for a well-deserved retirement . We have proven that by doing evil deeds, retribution does not come. We proved that in a year you can earn money for a lifetime. We have proved that it is possible to become number one not in our own words, but in recognition of other people.

In this regard, we:

1. Stop the set of adverts;
2. We ask the adverts to suspend the flows;
3. Within 20 days from this date, we ask adverts to monetize their bots by any means;
4. Victims - if you buy, now. Then your data no one will recover. Keys will be deleted.

That's all. The topic will be deleted in a month. Thank you all for the work.

Ransomware crew has been in business for a couple of minutes, earned an impressive \$ 600,000. © Kaspersky
GandCrab is the most prominent ransomware of 2018. By the numbers this ransomware is huge © Check Point
The third most prevalent ransomware family. © Microsoft
GandCrab has already been made of 50K cases worldwide, so far this year © Europol

Data breaches – check your password

<https://haveibeenpwned.com/>

The image shows a dark-themed section titled 'Largest breaches'. It lists several data breaches with their respective account counts and names. Each entry includes a small icon representing the breach type (e.g., a document, an envelope, or a logo).

Largest breaches	
772,904,991	Collection #1 accounts
711,477,622	Onliner Spambot accounts
593,427,119	Exploit.In accounts
457,962,538	Anti Public Combo List accounts
393,430,309	River City Media Spam List accounts
 359,420,698	MySpace accounts
 234,842,089	NetEase accounts
 164,611,595	LinkedIn accounts
 152,445,165	Adobe accounts
 131,577,763	Exactis accounts

Data breaches – check your password

Breaches you were pwned in

A "breach" is an incident where a site's data has been illegally accessed by hackers and then released publicly. Review the types of data that were compromised (email addresses, passwords, credit cards etc.) and take appropriate action, such as changing passwords.

Anti Public Combo List (unverified): In December 2016, a huge list of email address and password pairs appeared in a "combo list" referred to as "Anti Public". The list contained 458 million unique email addresses, many with multiple different passwords hacked from various online systems. The list was broadly circulated and used for "credential stuffing", that is attackers employ it in an attempt to identify other online systems where the account owner had reused their password. For detailed background on this incident, read [Password reuse, credential stuffing and another billion records in Have I been pwned.](#)

Compromised data: Email addresses, Passwords

Dropbox: In mid-2012, Dropbox suffered a data breach which exposed the stored credentials of tens of millions of their customers. In August 2016, they forced password resets for customers they believed may be at risk. A large volume of data totalling over 68 million records was subsequently traded online and included email addresses and salted hashes of passwords (half of them SHA1, half of them bcrypt).

Compromised data: Email addresses, Passwords

How to create a strong password (and remember it)

- » Small / capital letters
- » Numbers
- » Special characters
- » No common words
- » Whole sentences
- » My car has four wheels and a star
- » Mch4waa*

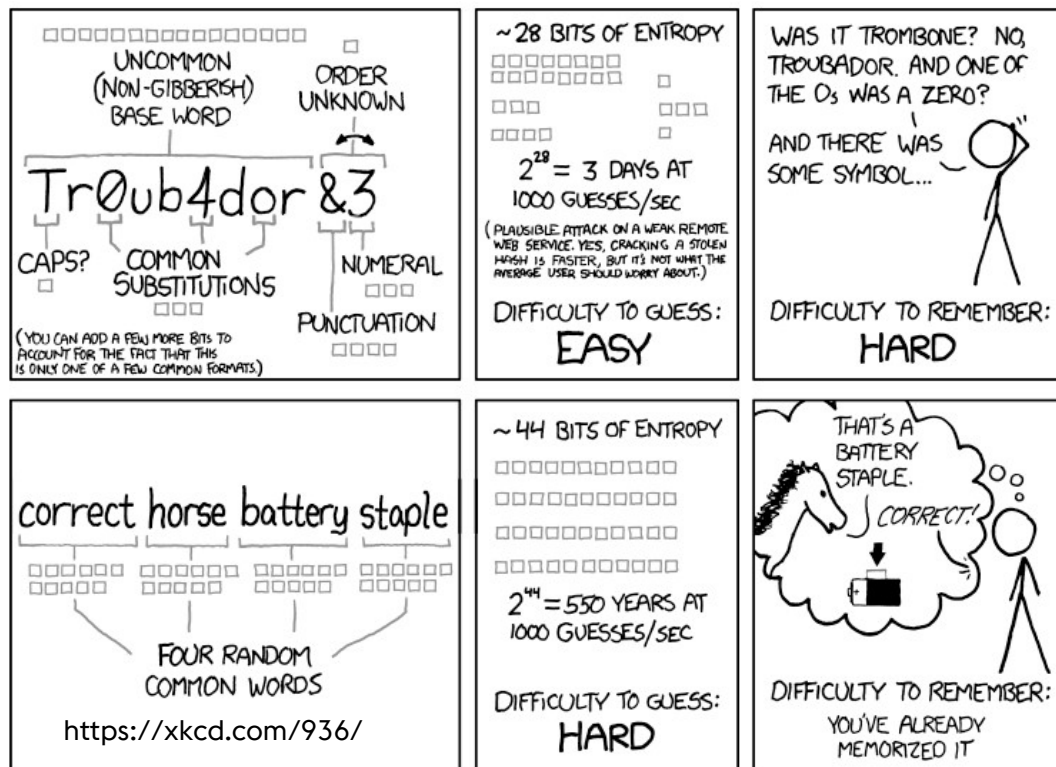

<https://www.howtogeek.com/195430/how-to-create-a-strong-password-and-remember-it/>

- » Use a password manager (KeePass, LastPass, 1Password,...)

Politician unlocking his computer

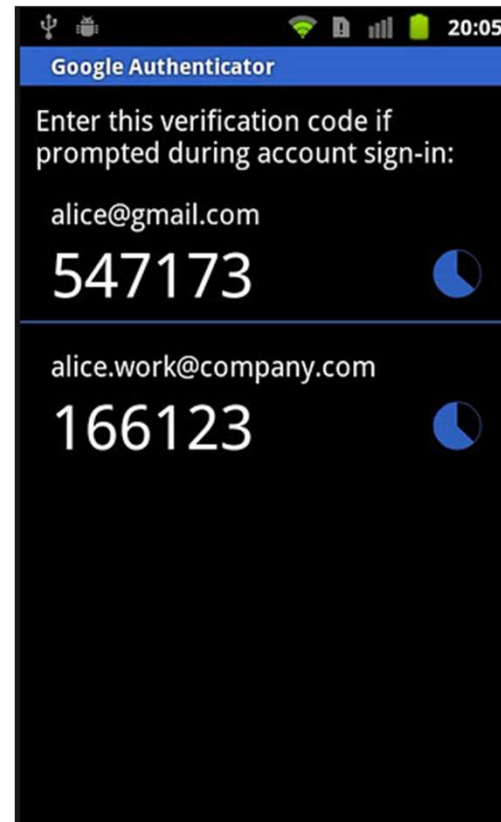

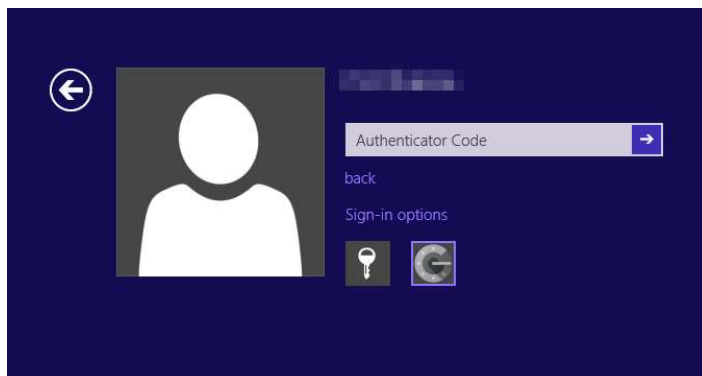

How to create a strong password (and remember it)

- » Current recommendations (NIST)
- » Use a whole sentence instead of single cryptic letters
- » E.g. “correct horse battery staple”

THROUGH 20 YEARS OF EFFORT, WE'VE SUCCESSFULLY TRAINED EVERYONE TO USE PASSWORDS THAT ARE HARD FOR HUMANS TO REMEMBER, BUT EASY FOR COMPUTERS TO GUESS.

2 Factor authentication

```
function GoogleAuthenticatorCode(string secret)
    key := base32decode(secret)
    message := floor(current Unix time / 30)
    hash := HMAC-SHA1(key, message)
    offset := last nibble of hash
    truncatedHash := hash[offset..offset+3] //
    Set the first bit of truncatedHash to zero
    code := truncatedHash mod 1000000
    pad code with 0 until length of code is 6
    return code
```
